DETAILED ACTION

Response to Arguments

Applicant's arguments, filed 07/24/2006, with respect to the 35 U.S.C 102(b) rejections of claims 32-35, 38, 41 and 43 have been fully considered and are persuasive. The rejections of claims 32-35, 38, 41 and 43 have been withdrawn. As stated by the Applicant, in the claimed invention the first magnetic field produced by the magnet is uniformly spaced at obtuse angles with respect to the reference plane interacts with the cantilever in order for the cantilever to switch states. The prior art of record teaches that the magnetic field from the magnet could only be perpendicular to the reference plane.

Election/Restrictions

Claim 32 is an allowable generic linking claim. Claims 36-37, 40 and 42, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 05/17/2005 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the

claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

Claims 32-43 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not teach nor suggest, in the claimed combination, a latching magnetic switch with a magnet, located nears a supporting structure, producing a first magnetic field with uniformly spaced field lines at obtuse angles with respect to a reference plane, a magnetic cantilever supported by the supporting structure and having an axis of rotation lying in the reference plane and a current carrying conductor, located proximate to the support structure, wherein the current produces a second magnetic field having a component approximately parallel to the reference plane and approximately perpendicular to the rotational axis of the cantilever in order to cause the cantilever to switch between a first and second states.

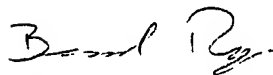

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
